Using that property and the Laws of Exponents we get these useful properties:  $\log_a (m \times n) = \log_a m + \log_a n$ : the log of multiplication is the sum of the logs :  $\log_a (m/n) = \log_a m - \log_a n$ : the log of division is the difference of the logs :  $\log_a (1/n) = -\log_a n$ : this just follows on from the previous "division" rule, ...

Hint to solve this division algorithm question. This GMAT sample question is a number properties problem solving question. Express the first division in the standard framework - i.e., using Euclid's division algorithm. Let the number be 'n', the divisor be 'd' and the quotient of the division be 'q'. So,  $n = qd + 24$ .
