### Total Knee Arthroplasty

Knee replacement surgery — also known as knee arthroplasty (ARTH-row-plas-tee) — can help relieve pain and restore function in severely diseased knee joints. The procedure involves cutting away damaged bone and cartilage from your thighbone, shinbone and kneecap and replacing it with an artificial joint (prosthesis) made of metal alloys, high-grade plastics and polymers.

### Knee replacement - Mayo Clinic

Knee replacement, also called knee arthroplasty or total knee replacement, is a surgical procedure to resurface a knee damaged by arthritis. Metal and plastic parts are used to cap the ends of the bones that form the knee joint, along with the kneecap. This surgery may be considered for someone who has severe arthritis or a

### Knee Replacement Surgery Procedure | Johns Hopkins Medicine

When you have a total knee replacement, the surgeon removes damaged cartilage and bone from the surface of your knee joint and replaces them with a man-made surface of metal and plastic. In a partial knee replacement, the surgeon only replaces one part of your knee joint. The surgery can cause scarring, blood clots, and, rarely, infections.

### Knee Replacement | Knee Arthroplasty | MedlinePlus

The primary indication for total knee arthroplasty (TKA; also referred to as total knee replacement [TKR]) is relief of significant, disabling pain caused by severe arthritis. (See the image below.)
