A zoom lens is a mechanical assembly of lens elements for which the focal length (and thus angle of view) can be varied, as opposed to a fixed focal length (FFL) lens (see prime lens).. A true zoom lens, also called a parfocal lens, is one that maintains focus when its focal length changes. Most consumer zoom lenses do not maintain perfect focus, but are still parfocal designs.

Zoom lens - Wikipedia

If we had to put our money on one particular lens, we'd probably choose the Canon RF 35-135mm f/2.8. Covering the short standard focal length of 35mm to the portrait telephoto focal length of 135mm, this would be a seriously interesting lens for portrait photographers looking to cull their kitbag and carry just one piece of glass.
